Anti-Corrosion Packaging Featured at FABTECH 2017

ALSIP, IL -- Daubert Cromwell, the leading manufacturer of anti-corrosion packaging for metalworking industries, will exhibit its corrosion inhibitor and rust removing products at FABTECH, Nov. 6-9, 2017, in Chicago. Technical sales managers from corporate headquarters in suburban Chicago and from its global subsidiaries will demonstrate uses for its VCI papers, poly films and bags, devices, rust preventive liquids and rust removers.

The exhibit at Booth A4917 will showcase VCI packaging that prevents corrosion on iron, steel, ferrous and non-ferrous metal parts during storage and shipment. Safe, effective, and environmentally friendly, Daubert Cromwell packaging offers a clean, dry alternative to messy and expensive coatings or ineffective methods such as desiccants or plain barrier wrap.

Booth visitors will see a typical metal parts bin lined with a VCI poly bag and VCI paper interleaving between layers of metal components. The interactive display shows proper use of anti-corrosion packaging to wrap and store valuable metals in all stages, from production through export.

For product selection and technical assistance, contact 800-535-3535 or info@daubertcromwell.com.

About Daubert Cromwell

Since the 1940s, the Daubert company family has set industry standards in corrosion prevention packaging. Today Daubert Cromwell VCI products are used in automotive, heavy equipment, electronics, military, foundry and fabricated metal markets worldwide. Corporate offices are in USA, Europe, Brazil, Mexico and China, with distribution and manufacturing networks in 32 countries.
